Segregation System

-Cow-

Smart selection gates for cow separation give you effortless control of cow flow.

Segregation System

For use with the Crystal herd management system

Smart Selection Gates for Accurate Cow Segregation

Individual cows can be separated from the herd to be divided into different groups or the whole herd can be redirected. These instructions can be made automatically or by the user. The user has the scope to make segregation Instructions on a one-time or periodic basis many days in advance of their implementation.

Automatic segregation is used for:
Separating cows into groups for feeding or grazing
Selecting cows for attention

Identification can be via:
Pedometers
Neck Transponders
Ear Tags

System includes:
Robust design of galvanised tube/box section
All bolt together, modular assembly in kit form– no welding required
Bolt down construction
All in one control panel
Manual override box
Kit available to upgrade from 2 way to 3 way

Walk through ID archway added

Manual Override box

Tiris System
for use with ear tag & neck transponder ID

ID box & pneumatic control assembly

Texas gates open once diverting gate has activated. Can be set to open/close only when diversion is required

Pneumatic cylinder

Diverting gate

3 way system

Both diverting gates pivot

2 way system

One diverting gate pivots (left or right) the other is fixed
